PROFESSIONAL SKILLS SUMMARY

Software Engineering Practices: SDLC, Agile (Scrum), Requirements Analysis, Business Modeling, Technical Planning, Code Quality, Technical Debt Management, Software Testing, Git Workflows

Software Design & Architecture: Domain Modeling, Object-Oriented (OOD), Event-Driven, Clean Architecture (DDD), 3-Tier Architecture, SOLID Principles, Design Patterns, CQRS Pattern

Backend Development: C# (.NET Core), Node.js (Express.js), NestJS, SQL/NoSQL, Database Design, API Design, Microservices, Message Queues, RPC Services, RESTful Services, Web Socket, Authentication (JWT), Authorization (RBAC), Task Scheduling, Background Processing, Performance Optimization, Caching

Database & Data: SQL Serve (EF Core), MongoDB (Mongoose), Elasticsearch, Redis, TypeORM, Relational Design, Non-relational Design, Query Optimization, Indexing, Transactions, Normalization

Frontend & GIS: Angular, JS/TS, Tailwind CSS, RxJS, OpenLayers, OGC Standards, GeoServer

DevOps & Delivery: Linux, Bash, Pm2, Docker, Containerization, CI/CD, Azure DevOps

Collaboration & Technical Skills: Code Review, Refactoring, Task Estimation, Technical Decision-Making, Driving Best Practices, Cross-Functional Collaboration, Knowledge Sharing, Mentoring

WORK EXPERIENCE

2021-11 TO PRESENT

Senior Software Engineer at [Intelligent Petro Processors \(INPROC\)](#)

Engineering software company delivering enterprise systems for gas network simulation, forecasting, monitoring, analysis, and operational data management.

- Engineer backend systems for gas network simulation, consumption forecasting, and transmission-network monitoring across multiple projects for the National Iranian Gas Company.
- Design and evolve C#/.NET services using Clean Architecture, CQRS, microservices, and asynchronous messaging with RabbitMQ.
- Improve long-term maintainability through architectural redesign, code reviews, Clean Code practices, technical debt planning, and continuous refactoring.
- Build GIS, data-ingestion, and reporting solutions using OGC standards, spatial services, web scraping, dynamic QueryBuilder-based reporting, and Excel automation.
- Contribute across the SDLC in Agile/Scrum teams, including requirements analysis, technical design, frontend collaboration, DevOps support, knowledge sharing, and mentoring.
- Technologies: C# | .NET Core | SQL Server | Clean Architecture | CQRS | Microservices | gRPC | RabbitMQ | NestJS | Angular | GIS | Docker

2018-06 TO 2021-11

Software Developer | Backend Engineer at [Future Technology \(FuTech\) Group](#)

Software solutions company delivering business platforms and products.

- Designed and developed ParadiseHub's CRM, a NoSQL-based, multi-branch workspace-management platform supporting 11 user roles, rental plans, reservations, online payments, wallet transactions, financial reporting, and multi-stage application workflows.
- Built advanced Elasticsearch query-building and search capabilities for large volumes of unstructured and filtered data.
- Developed backend functionality for HR and recruitment platforms, including IranHR and a job-search engine, as well as data-related components for a mobile game.
- Technologies: JavaScript | Node.js | Express.js | MongoDB | Elasticsearch | REST APIs

2018-01 TO 2018-06

Full Stack Web Development Trainee at [Maktab Sharif](#)

Web development coding bootcamp.

- Built a web-scraping pipeline that collected job postings from three major Iranian employment websites and powered a searchable job-search application.
- Ranked first in the bootcamp and received an invitation to join FuTech Group as a Software Developer.
- Technologies: HTML | CSS | JavaScript | jQuery | Bootstrap | Node.js | MySQL | Git

EDUCATION

2013-09 TO 2018-01

Shahrood University of Technology

- Bachelor of Science (B.Sc.): *Mechatronics and Robotics Engineering*

2009-09 TO 2013-06

Allameh Helli 4 High School (NODET)

- Diploma: *Mathematics and Physics*
